## Flexible Million Color Interior Lighting Kit

**Warning:** Please check your state and local laws before installing the kit. Every state has different policies and procedures for aftermarket accessories. LEDGlow is not responsible for any fines that you may receive while using the interior kit. This kit is for off road use only.

**Warning:** LEDGlow recommends this kit is installed by a licensed professional. Any damage to this kit that is the result of improper installation will void all warranties.

**The Control Box must be installed in a dry location! Having this part exposed to water or the elements will cause the kit's controller to fail. Any water damage or corrosion to this part will VOID all warranties.**

Please read the following instructions thoroughly before installing and operating your interior lighting kit.

### Interior Kit Includes:

- (6) 8 Inch Interior Tubes
- (1) Control Box
- (1) 4 Button Wireless Remote
- (12) 3M Mounting Tape Pieces
- (12) Mounting Screws

1. Arrange the tubes the way you plan to install them on the interior of the vehicle, and test the kit to ensure it is properly functioning before installing.
2. Remove any trim pieces from the interior of your vehicle that may hinder the installation of the tubes. (Optional)
3. Starting with the front tubes, mount them with plenty of clearance from any moving parts such as the steering shaft and pedals. Make sure the wires are not close to the seat tracks or anything that may potentially cut or pinch the wires.
4. Each interior tube can be mounted virtually anywhere in your vehicle using the included 3M tape or screws.
  - Some good locations are under the dash in the foot well area, under the driver and passenger seats facing the foot well area, under the back of the driver and passenger seats facing in the back seat, or even in the trunk.
5. Find a safe, secure, and dry position to mount the control box. We recommend mounting the control box in your center console, under the seat, or in your glove box.
6. Once the control box and tubes are mounted, run each tube's lead power wire back to the control box. Plug each tube into one of the six available ports.
7. Connect the red wire to any 12 volt source. If you need to extend the power wires, be sure to only use a 14 or 16 gauge automotive grade wire.
  - If you are connecting the red wire directly to your battery, you must go through the fire wall.
  - You need to protect the wire by using an existing grommet or by drilling a hole and adding a new grommet which is available at any auto parts store, and be sure to install a fuse within 6 inches of the power source. **(Fuse is not included if you have to extend the power wire.)**
  - If you connect the red wire to a switched 12v source it may not remember the color and pattern your kit was on before the vehicle was powered off. You can avoid this problem by connecting the power wire to a constant 12 volt source. **The kit will stay on until you turn it off if it is connected to a constant 12 volt source.**
  - If you are powering your kit through the fuse block, LEDGlow recommends that you install the power wire using our add-a-circuit which is available online at [www.LEDGlow.com](http://www.LEDGlow.com).
8. Connect the black ground wire to any good ground source on your vehicle. You can connect this wire directly to the battery or any engine ground.
9. **DO NOT SHORTEN OR CUT ANY OF THE POWER WIRES. This will destroy the kit and void the warranty.**
10. If you removed any interior trim for this light kit installation you can now reinstall them and test the functionality of your kit.
